LinkedIn | GitHub | sumant.etw@gmail.com | Portfolio | 9068666615

AIML Engineer | GenAI | Agentic AI | Data Analyst | SQL

AI/ML Engineer / Data Analyst in the making with a strong foundation in Machine Learning, Deep Learning, and Generative AI, with hands-on Internship experience in real-world, data-driven solutions. Skilled in building scalable AI applications and end-to end ML pipelines. Also reached the semi-finals in IIT hackathon focused on GenAI, showcasing strong problem-solving skills.

EDUCATION

DY Patil University, Pune 2022-2026
BTech in Artificial intelligence and Data Science (CGPA: 9.52/10)

SKILLS

Programming : Python, SQL, HTML, CSS, File Handling,Streamlit
Machine Learning/Deep Learning : Supervised & Unsupervised Learning, Feature Engineering, Model Evaluation
Cloud Platform : AWS (S3, VPC), Docker, CI/CD
GenAI/LLM : LangChain, Vector Databases, OpenAI APIs, Document Intelligence Pipelines
Data Analysis: EDA, ELT Pipelines, Data Visualization, Power BI, Tableau
Audio & Signal Processing: Speech Emotion Recognition, MFCC Feature Extraction
Tools: Pandas, NumPy, Flask, REST APIs, Git, GitHub, spaCy, Tesseract OCR,PyMuPDF,Microsoft Fabric,Microsoft Foundry

SOFT SKILLS

Problem Solving | Analytical Thinking | Communication | Team Collaboration | Time Management | Adaptability

EXPERIENCE

- **SmartKargo | *(AI Intern)*** July 2026
  - Currently working on automating internal business systems and operational workflows and making Data Agents.
  - Working with Microsoft Fabric and SQL to query, manage, and analyze operational data.
  - Building and optimizing data workflows, BI tables, and reporting processes for business operations.
  - Supporting automation and data integration initiatives to improve system efficiency and operational performance.
- **HEProAI | *(AIML)*** Jan 2026-Mar 2026
  - Developed an AI-based mentoring system for personalized guidance using Machine Learning and NLP.
  - Built data-driven pipelines for real-time support using Python, Scikit-learn, and basic LLM concepts.
  - Enhanced user engagement by delivering context-aware recommendations and adaptive learning support.
- **Algonive | *(Data Science)*** Oct 2025-Dec 2025
  - Built a chat analysis system to extract insights like user activity, sentiment, and word frequency using Python, Pandas, and NLP.
  - Implemented data visualization and pattern detection using Matplotlib, Seaborn, and text preprocessing techniques.
  - Generated actionable insights to understand communication patterns and user behavior trends.
- **Cognifyz Technologies | *(AIML)*** Aug 2025-Sept 2025
  - Developed a classification model to predict BP levels using Machine Learning algorithms with Scikit-learn.
  - Performed data preprocessing, feature engineering, and model evaluation, achieving ~90% accuracy using Python.

PROJECTS

AI Multilingual Document Invoice Extractor | GitHub | IIT Hackathon Semi final PROJECT

- Built a multilingual invoice extractor using ***Pytesseract OCR*** and Roboflow augmentation for diverse languages, signatures, and stamps.
- Implemented ***YOLOv8*** with *EDA* preprocessing for accurate invoice field detection.
- Integrated ***GenAI*** with ***Streamlit*** UI for contextual extraction and real-time visualization.
- Enhanced extraction precision through optimized preprocessing of noisy, unstructured multi-format invoice data

AI Smart Itinerary Planner | GitHub

- Developed an AI-powered travel planner using RAG, generating day-by-day itineraries, city insights, and hotel recommendations from user input.
- Built using Mistral ***LLM (ctransformers), FAISS, and Flask, with Google Maps links*** and hotel price filters for accurate travel content.
- Deployed on **AWS S3**, ensuring scalability and clear separation of frontend, retrieval system, and AI logic.
- Improved recommendation relevance using context-aware retrieval and prompt optimization.
